NOTE XXVI.

ON SUMATRAN LUCANIDAE

BY

C. RITSEMA Cz.

In a lot of Lucanoid beetles, captured in Deli (East-Sumatra) and sent to me for identification by Mr. J. D. Pasteur of Batavia (Java), I found the following species which were not yet recorded from Sumatra.

Hexarthrius mandibularis H. Deyr.
Prosopocoelus squamilateris Parry.
Odontolabis Brookeanus Voll.
Eurytrachelus rama Boileau.
Aegus amictus H. Deyr.
» *Eschscholtzi* Hope.
» *bigibbosus* Rits. [1]).
Nigidius obesus Parry.
Figulus rugosus H. Deyr.

With the exception of *Eurytrachelus rama* Boileau (le Naturaliste, 1897, p. 191, fig.) and of *Aegus bigibbosus* Rits. (ante p. 185) all these species are already known as belonging to the fauna of Borneo.

Leyden Museum, November 1897.

1) I am happy to say that Mr. Pasteur most generously has offered the type-specimen of this species to the collections of the Leyden Museum.
